

bigcleanswitch.org

Hello.

We're Big Clean Switch.

Proudly partnering with

Big Clean Switch is part of Brakkn.

We're a B Corp, part of a global movement that is using business as a force for good.

Why we're partnering with Redbox

Redbox is one of the UK's leading office services groups, and a B Corp to boot.

RedBox's services include innovative solutions for employers to help ensure that, despite increased levels of home-working, their people have the same levels of safety and comfort as they would expect in an office.

That's where we come in - helping those same employees to reduce the cost of home working, while making energy choices that are better for the planet.

Working with us makes business sense

**A few words about
green energy**

What is green energy?

'Green energy' is power generated from the elements – the sun, the wind, our rivers and oceans, plants - even the warmth of the ground beneath our feet. Unlike electricity generated by burning fossil fuels like oil, coal and gas, green energy has little impact in terms of climate change and air pollution.

How do green energy tariffs work?

Picture the National Grid like a big pond, fed by electricity from lots of different sources. When you're on a green tariff, your supplier guarantees that the electricity you take out of the pond is matched by the same amount of renewable energy going in. The more of us on green tariffs, the cleaner the pond gets.

**Green energy for
your employees**

**Why help your employees switch
to clean energy?**

One simple change with a big impact

For a typical home, switching to a renewable electricity tariff saves around 800kg of CO₂e. That's the equivalent of taking a car off the road for six months.*

* Calculated using Defra conversion factors for 2020. CO₂e savings would be even greater if using residual fuel mix (removing green electricity already 'claimed' by other users from UK fuel mix). Household consumption figures use Ofgem's definition of a medium consumption household. Vehicle carbon calculations use SMMT's 2019 average for a new car, and government figures for average distance driven per year (2017).

A woman with long blonde hair, wearing a grey t-shirt and a floral apron, is smiling and looking down at a young girl. The girl, also with blonde hair and wearing a yellow and white patterned apron, is laughing joyfully. They are in a kitchen, standing at a table covered with flour and dough. The woman is shaping a piece of dough, and the girl is reaching for another piece. In the background, there is a window with a view of a city and a kitchen counter with various items like a blender and a pot.

Saving Money

Saving your employees money We save people a lot of money on their energy bills.

£270

on average.

That's important at a time when many employees are spending more time at home, pushing up the cost of heating and lighting their homes.

Our platform also allows you to offer exclusive discounts to your employees when they switch.

This could be in the form of an account credit, i.e. £25 of free energy.

Or, you can donate that money to charity instead.

Suppliers you can trust

We vet our suppliers to make sure their customer service is up to scratch, and make our users a simple promise: If they have a problem with their new supplier, we'll take it up on their behalf.

Low prices and clean energy, with peace of mind included.

Stand out customer service

Our values show through in everything we do, so you can be sure we'll treat our users with care and respect. That means transparency, responsiveness and always **going the extra mile.**

Ver helpful!

Got through to someone online within a few minutes who was very quick, polite and helpful. Made a change from the useless company i tried to switch to before - avoid Shell at all costs if you value your sanity, but these guys seem spot on. Fingers crossed for a smooth switch :)

Energy suppliers

Firstly thank you very much for the super efficient and excellent customer service. The savings I'll be making over the year by switching to your company will be in the region of £650.00 per year. I will be highly recommending you to all my friends and family and anybody else who wants to save money on their energy bills. 🙌

How it works

1. Promote

You encourage your employees to switch, highlighting the financial and environmental benefits. We'll help you draft these comms using tried and tested messages.

3. Switch

Employees select their preferred tariff and complete a few more details to submit a switch application. They receive a confirmation email from us and the switch goes live 14-21 days later.

If you're choosing to convert your commission into free energy for your employees, this will be added to their new energy account within six weeks of the switch going live.

2. Quote

Your employees visit a dedicated page on our website (or a page on your own website where we can embed our switch experience using our simple code).

They enter some details about their current supplier to compare prices across our green suppliers.

If they need help, they can speak to our team over live chat, email or telephone.

4. Report

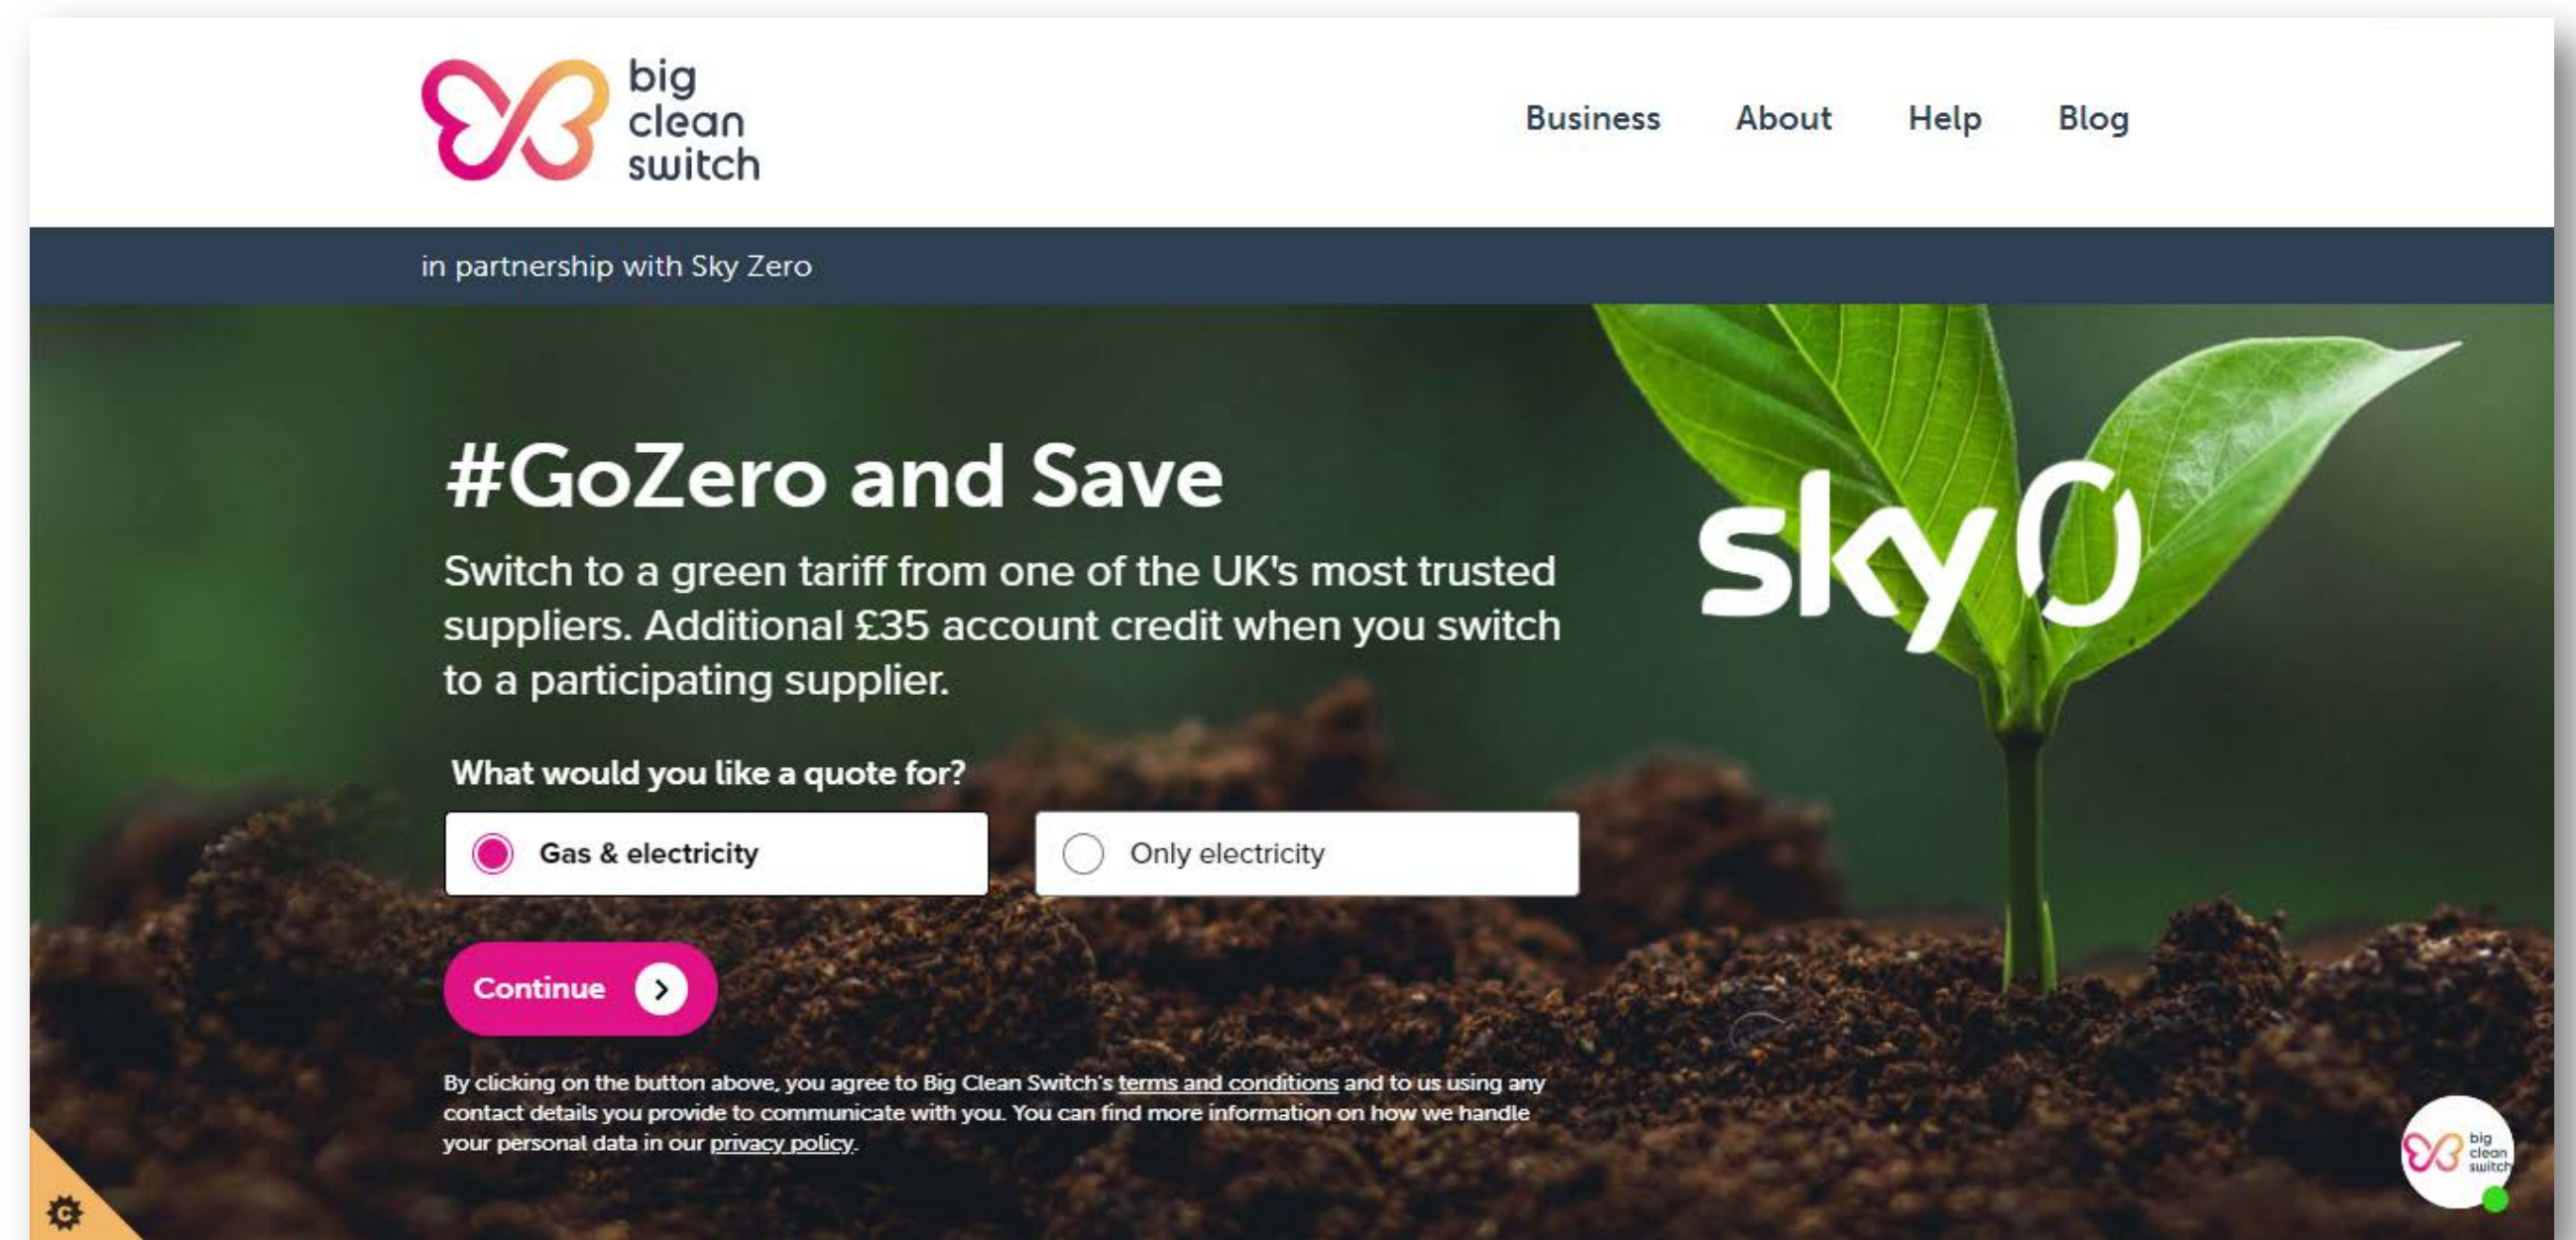

We provide regular updates setting out number of switches, money saved and CO₂e abated.

A branded switch experience

Your employees use a dedicated page on our website to compare the prices of leading green energy suppliers, and switch in minutes.

Your switch page is designed to allow you to tell your own sustainability story while helping employees take action on climate.

If you prefer, you can use a simple piece of code to embed the switch experience in your own website.

Example of a co-branded landing page – this one has been created for our partnership with Sky
